Education

Indian Institute of Technology, Roorkee

November 2021 – May 2025

B.Tech in Bioscience and Bioengineering

Experience

Associate Product Manager – Emversity

July 2025 – Present

EmStudio — a **0→1**, 7-stage **generative AI** content platform.

- Replaced 5 disconnected content tools with a single pipeline spanning subject creation to final export — informed by research with the writers, SMEs, and QC reviewers who'd use it daily — architecting its frontend and **LLM**-powered QC engine.
- Categorized AI-flagged errors — spelling, grammar, factual, image — by type to auto-route fixes to the right **cross-functional** stakeholder (writer, SME, or illustrator), and required human Accept/Reject sign-off before any factual content shipped — cutting manual QA effort by **60%** while holding a **90%+ quality score** across 44 live projects.

Socrates — a 3-layer, **LLM**-powered natural-language-to-SQL interface (Interpreter, Intent, Semantic layers).

- Restricted to 7 approved views to prevent hallucination — cutting a **3-day, two-person manual query turnaround to instant** answers.
- Built a **PCA/K-means clustering** pipeline with stratified sampling on top of it, surfacing plain-English conversion insights from thousands of sales call transcripts, and always shows the generated SQL for auditability — piloted in one centre before scaling to 25+.

Root-Cause Analysis — across 8 BigQuery tables and **1.4M leads**.

- Isolated three junk affiliate partners clogging the lead **funnel** and a 69% cut to the highest-converting channel as the drivers of a 24% enrollment decline — proposed a **GTM** recovery plan projected at **+480 enrollments/year**, anchored to rates already proven in 2025's own data.
- Tested six hypotheses quantitatively before validating any qualitatively, and separately found leads called within 24 hours convert at **3.4x** the rate of those called after 8–14 days — a finding that fed directly into Emversity's outreach SLA.

Projects

JSP – AI-Powered Job Search Platform

May 2026 – June 2026

- Built an end-to-end job search platform that unifies **recruiter outreach**, **application tracking**, and **job discovery** into one pipeline — replacing the multi-tab, spreadsheet-and-email workflow most candidates default to.
- Shipped three core systems: AI-generated cold outreach emails (GPT-4o) with Gmail integration; a Kanban-style pipeline with an automated Day 0/3/5/7 follow-up engine; and a job feed aggregating multiple sources, ranked by a **100-point, 5-signal relevance-scoring algorithm**. Built on Next.js, Supabase, and OpenAI APIs.

Skills

Technical: Python (Pandas, NumPy, Matplotlib), SQL, **BigQuery**, **OpenAI APIs**, **Claude Code**, Machine Learning, **Prompt Engineering**, Tableau, Figma, Supabase, Next.js, Google Analytics, JIRA

Product: **LLM System Design**, **Generative AI Product Strategy**, **0→1 Product Development**, Roadmapping, PRD Writing, A/B Testing, Funnel Analytics, User Research, GTM Strategy, Agile/Scrum, Stakeholder Communication, Cross-functional Collaboration

Awards / Position of Responsibility

- **Global Semi-Finalist, Hult Prize 2023 (Melbourne)** — Top 4 of 100+ global teams; led GTM strategy, supply chain, and unit economics for GreenThreads, a sustainable hemp-fashion startup.
- **Additional Secretary, Student Mentorship Program, IIT Roorkee** — managed 240+ mentors and built mentor-mentee frameworks for incoming UG batches.
